RESEARCH INTEREST

My research interests focus on building end-to-end AI systems for scientific discovery, spanning **large-scale model development**, **data generation**, **atomistic simulation**, and **scientific validation**. My work has focused on physically grounded modeling of atoms, molecules, and materials, including **solid-state physics** [C1], **molecular science** [C1,C4,C5], **density functional theory (DFT)** [C1,C4,C5], and **structure prediction and generation** for **MOFs** [C2,C3,P1]. I am also interested in extending these ideas toward **molecular dynamics**, **protein and biomolecular design**, and **autonomous laboratories**.
